

## ***Abstract***

*The quality of place is a multidimensional concept that is influenced by different parameters. And these parameters are the same parameters that affect on the society advancement and Inattention to this subject can have bad, irreparable results on advance procedure. This paper discusses about the quality of placement in village "Doshman ziyari" - Mamasany County based on recognition and analysis to provide the necessary. The researcher used way of study based on model cross- sectional method, field study, and using questionnaire. And finally he used software SPSS to process the data. The results of test T show that based on the quality of placing components there is a significant difference between mountainous villages and plan villages on the one hand and the villages with rural municipality or without municipality on the other hand. Mountainside villages were in the first step- with 40.46 percent- and plan villages with 17.29 percent and mountainous villages with 15.23 percent were in the next rankings. The villages with "Conductor design" following 40.69 percent were on the firs step and the villages with rural municipality with 30.80 percent and without municipalities -10.59 percent were in the next ranking.*
