

Elam Urban Management Performance Analysis With an Emphasis on Urban Good Governance Indicators

Abstract

Urban good governance is an approach as the most efficient, the low and the most stable method of doing an urban management. This approach is based on the development of democracy and justice. Urban good governance on concepts such as; corporation, replication, responsibility, legislative, consensus-oriented, justice-oriented, transparency, efficiency and proficiency, that these concepts are known as indicators of urban good governance. This research with aim of analysis of performance urban management of Ilam with urban good governance indicators, identifying efficient indicators in formation of urban good governance patterns in this city and also identifying of strengths, obstacles, challenges in making an appropriate governance in urban management system of Ilam. Methodology of this research is descriptive-analytical based on documentary studies and librarian and field reviews that now we dispense 383 questionnaire between inhabitants of Ilam city incidently. Analysis of this research in use of statistics software and statistics methods such as K-S test, One sample T-test, Friedman Test, Two samples Independent sample T-test, one way ANOVA also using fuzzy- ahp (chang) prioritized indicators of urban good governance. The share of each of the indicators of urban good governance has been identified in ilam city. At last using of Swot model identifying strengths, weakness, opportunity and threat in making appropriate governance in urban management of Ilam. The result of this research is that urban management of Ilam with urban good governance indicators is not in a appropriate condition and indicators are in a low level, transparency and replication indicators are more efficient in formation urban good governance patterns in Ilam city.
