Abstract

It goes without saying that achieving sustained development management goals in rural areas depends to a great extent on professional qualifications of local managers. Thus, selecting qualified managers have always been one of the main concerns of rural development experts and authorities. Therefore, self-reliant rural managers Management Skills who take the role of village management should benefit from four management skills and qualifications: technical, human, conceptual, and cognitive. Therefore, regarding the importance of this issue, the present research aims at evaluating the four management skills mentioned above for Management Skills and its effect on satisfaction of people and members of Islamic Council in villages of Central district of Kahnouj County. To this aim, library and document methods are used to evaluate the records and defining the problem, and field observation and questionnaire filling were used in order to collect data in the village. Then, SPSS and Excel software were applied to analyze the data and to draw graphs; also, to draw the required maps Arc GIS software was used. The result of the two hypotheses under study indicates that according to Spearman and Pearson tests there is a positive and significant relationship between the level of enjoyment of the four qualities and general characteristics of Management Skills. Besides, results obtained from testing the second hypothesis reveal that there is a significant relationship between management skills of Management Skills and satisfaction of people and members of village Islamic Council, but their correlation is shown to be weak to medium.
