

Abstract

Today, in a sustainable and developed, health, safety and the environment manage system as a systematic approach in its agenda this system in the development and propermaking equipment and urban public spaces, with a systematic approach and preventive led to the preservation of human resources and improving the health and safety of citizens is an approach of the study as planned public spaces, in Mashhad Health, Safety and Environment (HSE) is to measure indicators of health, safety environmental and public spaces (parks and walkways) in Mashhad, and determine the level of performance of the HSE culture in the study area (2 area of the Municipality of Mashhad) to assess the status of the system as a dynamic system and efficient management pay. Methods In this descriptive-analytical and information needed for the field and the library collection. And the population of users space and the municipality of Mashhad form gives staff. Data analysis using (FGRA) and HSE culture was performed using a ladder. The results showed that health, safety and environmental indicators spaces are studied in average condition and favorable position away. HSE culture in the municipality as well as elements of the administrative organization in the city, will not be fully implemented and the status of the municipal area is located on the second level ladder HSE culture development. So pay attention to all aspects of health, safety and the environment in the design of each of these places and get to know the residents and city managers with the elements and benefits management system more is recommended.
