Abstract:

Oriented approaches to reducing unemployment, general business development, outside the field and making a variety of rural income in recent years that most planners in most developing countries, especially in our country is. Subsequent studies have demonstrated the agriculture sector in our country over the absorption capacity of young seek work in rural areas does not. Therefore, all new fields of business and agriculture and non-agricultural income next to rural areas are considered a necessity to be inevitable. Meanwhile entrepreneurship as a strategy is considered basis. First entrepreneur to develop awareness of each activity and the potential capacity of potential environmental, social, and ... In order to activate them are. Thus identifying local entrepreneurial capacity is important. These articles explanatorily approach - analysis with the aim of presenting and developing practical framework Astronomy capacity development activities in the village's entrepreneurial sector is derived in Sedeh District of Eghlid County Questions that will be expected from this research is in this way, 1- In Sedeh District in Eghlid environmental capacity for non-agricultural entrepreneurship is the priority. 2 - in terms of location, capacity development between villages sector entrepreneurship are different century. The statistical research is century 22 village In Sedeh District. To do to achieve results, the method to determine prioritization of economic activity and Georgshapoo and Bojogarnea industry model matrix is used. The results indicate that this subject area studied agricultural activities meet regional economic needs and not employment. Therefore you increase revenue, to make diversity of revenues and job creation, environmental capacity, for non-agricultural entrepreneurship, such as industrial and service capacity for balance in the region is essential. Expected results of these study entrepreneurs to develop a week to create entrepreneurial activity in rural areas to help.
