

Assessment of public spaces of Shiraz city with attention to handicapped and disabled require

Abstract

Handicapped is a phenomenon of biological and social, and this is a fact that all of societies are exposed by it, a part from development degree, both industrialized and unindustrialized countries. now, importance of use of urban spaces of suitable for different groups is manifest. Study of the public spaces with attention to handicapped and disability requirement and programming it is one of necessarily of each society especially our society, that contain many handicapped and disability after inflicted war. In this research with attention to subject importance, we explain one of handicapped and disability requirements in urban space that is public space. The aim of present research is study and assessment the public urban space with attention to handicapped and disability requirement in 3 regions of city center, Azadi Park and Hafeziye in Shiraz city. Research methods is based on library and document studies, Observe researches, interview and delivery information by competition and analyzing data with Spss software. For determining and classifying the sample region Topsis decision model was used. Results show that unsuitable public space devises and unachvement to them is the greatest in traffic subject in opinion of handicapped and disability with 23/4 percentage and after this unsuitable sidewalk and holes be uneven pavement surface is other problems with 21/3 percentage. In Hafeziye 22/3 and 18/3 in Azadi park. Using Topsis model shows, urban traffic position in city center undesirable position ($0 \leq 0/177 \leq 1$) , in Azadi Park is a little desirable ($0 \leq 0/390 \leq 1$) and Hafezeye region is in desirable position ($0 \leq 0/744 \leq 1$).
