

## **Abstract**

Addiction issue is one of the most important social issues in today's world that is being displayed in most countries as a major problem for governments. Nowadays, drugs crisis has become the day crisis of the world beside three other crisis, including environment crisis, atomic threat crisis and poverty crisis. In Sistan region and because of having same borders with Afghanistan which is a drug producer country, the access of drugs is so easy and its usage has led to disorganizations and major challenges for households. Therefore the purpose of this research is the analysis of socioeconomic impacts of drug addition on rural families in Sistan region. This research is a descriptive analytic study which is based on examining of documentary resources and field examinations through completion questionnaire. Statistical community of this study includes households that have been faced addiction issue in villages of Sistan. Samples for study including 360 subjects selected through random sampling method. For data collection experts questionnaire and household questionnaire were used, for data analysis SPSS software package and statistical method of frequent measurements plan and paired-T were used. Research findings showed that the socio-metric average was  $95 \pm 29$ , economical factor  $69 \pm 22$ , environmental factor  $52 \pm 21$  and the factor of individual characteristics for the addiction of households in Sistan was  $62 \pm 16$  and from the statistical view these factors had a meaningful difference ( $P < 0.001$ ) together, and also the metric average of economical impacts was  $120 \pm 42$  and social impacts of drug addiction was  $97 \pm 68$  that had a meaningful difference ( $P < 0.001$ ) together; the findings also showed that the average of non-cultural activities was  $187 \pm 64$ , and the average of cultural activities was  $87 \pm 26$ , and they had a meaningful difference ( $P < 0.001$ ) together. With regard to the research findings social factors of the addiction issue have more. Moreover the non-cultural activities have the more important role in decreasing of the drugs usage or withdrawal in the households of the villages in Sistan.
