

Abstract

Security, a healthy community, background, and feel the security of human societies developed instrument platform. The happiness of a society depends on maintaining the security and survival of feeling it. Community involvement in securing one of the examples of cooperation in national development. Because if you order the all-sided development without a comprehensive non-security will be possible. Therefore, the present study aimed to evaluate the role of urban citizens in the amount of economic security in Zabol. For this reason, taking advantage of the methodology and questionnaire methods, theories of the subject matter experts and citizens of different sizes will be studied and the analysis of its data with the help of statistical methods-mathematics and using GIS software, OFFICE/EXCEL, SPSS and AHP model to prioritize the economic role of citizens in the amount of security will be used in the city of Zabol. As well as statistical research community, through the method of sampling distribution among individuals and Cochran will be discovering the mechanism of simple random sampling survey. The results of the analysis of data shows that economic security role has an impact on the citizens of the city's urban management in Zabol but did not use this potential for optimum use. At the end of the optimum economic role to increase occurred in securing the city of Zabol.
