**Abstract:**

Scientometrics is the measure of knowledge. The purpose of scientometrics is to evaluate the latest developments in any scientific trend and to examine the factors influencing its growth. One of the most basic parameters that can be measured from the title mining approach is the author of thematic orientation and lexical co-occurrence. The field of Arabic language and literature as one of the most important fields of humanities in Iran with the publication of more than 10 scientific research journals has always been of interest to researchers accordingly, the present article seeks to use statistical and descriptive-analytical methods as a search for articles published in the last 12 periods of the Arabic literature magazines, scientific association of Arabic language and literature, Lasean Mobin and research in Arabic language. To achieve this goal, introduce the scientometric techniques used from the perspective of the knowledge index and the title index of the authors of the network production of co-authors of universities and high-production organizations and co-university networks. From the approach of measuring the thematic parameter of the research priorities of the mentioned journals, the share of the thematic tendencies language and literature in the journals is determined and then based on the keyword measurement the titles of the most frequent words. Preliminary results of the research show that Rasoul Blavi is the author of all the magazines studied with a frequency of 13 articles. According to the network, writing is most often related to Blavi and Khezri. Bahout fi al-langhat al-arabit magazine has a larger share of the network and its main priority is the research orientation of the studied journals.

**Key words:** science survey, research papers, Network is both lexical, Subject clustering, article.
