

Explanation of Islamic – Iranian development pattern in rural areas of Iran

Abstract

During regime of development knowledge, different patterns of development are introduced that in his time at all levels and monitoring components penetrate on development management and has a consequences of place – space spatial in the global field, regional, national and territorial. mainly patterns of development in third world countries, based on developed pattern non- native that same as the version for in third world countries has been used. Using these similar patterns for countries with different term social, economic, cultural, political and natural. In most cases, not only the development but due to lack of compatibility with the native cultural of these countries them with cause the challenges and problems faced has in the way of their development. Several experiences and results from the use of western patterns of development, in third world countries such Iran to have concluded that use indigenous development pattern, a pattern that relies on indigenous cultures and belief is basis (Islamic – Iranian) that is the best pattern for development. In this study, the explanation of Islamic – Iranian) development pattern in rural areas of Iran, with method descriptive analytical study by using questionnaires and spss software.
