

## Abstract

Development projects in the country's economic and budget of the importance of having the bulk of the budget will be allocated. National projects - a region that is those projects for different regions are defined at the level of ministries and special credit lines and possible effects of trans-regional and Frabkhshy and in most cases , are the many city and county. Form of regional policy decisions at the national level for areas that regardless of the attitude measures with regard to the nature of the elements is and indeed a greater ability to balance between the local and the specific needs of different regions and social issues dealing with them. In this context, policy measures and regional development effects unknown in Sistan is the main reason for the present study. In this regard, all of the effects of implemented projects with regional impacts in the Sistan region in the last ten years as a project to transfer water to the city of Zahedan in Sistan, Sistan drainage wells fourth quarter, road, transit, cement, wall border, Paul Silk, Organizational Change the space of three city a city, rural settlements into cities and development of tertiary education is concerned. The study was a descriptive-analytical method development and the model using AHP and Expert Choice software and SPSS have been evaluated . Results indicate that the overall prioritization of projects from the perspective of the respondents ( administrative experts Ghyradary ),higher Education Development Project by weight ( 0.333 ) had the greatest impact on the projects reviewed and Water Transfer Project Zabol and Zahedan border wall weight ( 0.011 ) have the least impact on the projects reviewed. I also test mann.whitney between administrative and non-administrative professionals in the field of employment impact of the measures taken during the year ( 90-80 ), there was no significant difference in the Sistan region. At the end of the study, analysis and recommendations for improving decision making in the field of regional planning in specific areas of the Sistan boundary is presented.
