

Geographical Analysis of Social Network, Effects on Rural Areas (Case Study: Rural Areas of Ghonabad County)

Abstract

Study patterns of social networks and analyze them in terms of geography is important in many ways. The Network, on different aspects of life and affects human communities and according to Contact patterns in the form of increasingly transcend national boundaries Network It results, The growth of social networks to create new applications to achieve development occurs. The purpose of this study was to analyze the effects of social networks on rural development patterns is the city of Gonabad.

Research data to the library method (use of historical sources and documents and research papers) and field observation, interviews and questionnaires were collected. A sample using a sample of 370 questionnaires were selected in 38 villages. The results of the data analysis and research, according to the chi-square test and Wilcoxon test and Mann - Whitney showed: 1. With the development of social networks and communication patterns have been break new communication patterns are formed and old communication patterns have lost their boom Ast.2-- With the proliferation of social networks, social networking function impermissibly weakened and lost in Barhi cases. 3. The public status and social networking features, including compression, access, according to the characteristics of the environmental, physical, economic, social, physical and every village is different. This means that the village economic and social situation was better. And the center of the village or the nearby town more or virtual network usage and availability of the village more.

Key words: Geographical analysis, Social network, Rural areas, Ghonabad County.
