

Abstract

Nowadays and with increasing in the population and urbanization, some complicated problems have occurred in the lives of the townspeople and the urban society needs a series planning to improve the level of life on the city. In the meantime, the meaning of the life quality that is one of the newest views in the field of reforming and development of the urban development is necessary to resolve the problems of urban life and achieve peace and welfare of the citizens. The goal of the current research is to assess the indices and the study of the exiting quality of live in the Kahnoojcity thathas focused on the socio- economic indices in the different areas of the city. Based on the description-analytical method and by using the document, library and field studies the data of the research were analyzed by AHP model and SPSS software. The results of the indexes of the life quality (social and economic) in the different areas of town and in citizen's t opinion showed a dramatic difference. After the study of the 4 areas of the Kahnooj city, the region 2 (weight= 0.402%) is on the first level of the life quality factor and then the region 3 (weight= 0.277) is leveled as the second but the 1 and 4 are placed on the lower steps of the life quality. Finally the index of the improvement of the life quality in this town rather than User equitable distribution of services and development of the healthy facilities and health care is suggested.

Key words: life quality, socio- economic indexes, Kahnooj city.
