

Evaluating and Assessment Citizens Sense of Security with Approach to Urban Landscape

Case Study: The First Zoon of Zabol

Abstract

Security as one of the basic needs of citizens in urban structures it results and is given special emphasis. Scope as public urban space in addition to creating a sense of security for citizens to bring peace to the melt will reduce the level of interaction and social activities- and it eventually feels good and is increasing the consent of the citizens and enhance the environment power supply is stopped . The survey studies, theoretical issues related to the landscape, the landscape of research in the areas of perception, action and form the perspective of the formation of the desired component "sense of place", "local identity", "memorable", "readability and clear picture of the environment ", " public perception and visual pleasure "and" form and morphology "as Index citizens feel safe using indicators to measure Definition urban landscape. The research method is analytical and descriptive statistics and inferential test T, Pearson, Wilcoxon tests were used to analyze and test the research hypothesis. The results suggest that The total area of the city of Zabol, the average amount 2/817 sense of security, a moderate downward and there are generally two components of a sense of place with an average of 3/08 place with an average 3/14, and identity, maximum impact At the end of suggestions to increase citizens' sense of security provided.
